Summary

Software developer with nearly 5 years of experience. I'm at my best on the .NET backend — building APIs, shaping data models, and working through the database layer. Self-taught and still learning; I keep up with AI tools and use them where they actually help day to day.

Check out my website to see my current projects.

Tech Support One - .NET Developer

Aug 2021 — Sep 2024

- Built mostly Windows desktop applications with WinForms and SQL Server, plus web projects for a small custom-software shop.
- Owned projects end-to-end — worked directly with customers to scope and deliver software to their needs.
- Part of a small dev team where each developer often carried their own project from start to finish.
- Left voluntarily to relocate and pursue independent software development.
